

## Aerospace Automated Guided Vehicle (AGV) Solution

- One of the world's largest airplane component manufacturers built a new facility to manufacture the first 40 feet of a new 787 composite airplane. With a high volume of pre-orders and demand high for the foreseeable future, the company needed a technology solution to optimize production efficiency and quality.
- Brock Solutions designed, developed, and deployed a "Control & Indication" (C&I) solution that effectively coordinated the movement of Automated Guided Vehicles (AGVs) and provided plant-wide performance monitoring.
