

## Sheet Hydroforming and Panel Build Project Overview

- A Big 3 automotive manufacturer purchased a new sheet hydroforming press line from a Japanese OEM for installation at one of the automotive manufacturer's production plants in the United States.
- Brock Solutions provided the electrical controls and automation solution, and fabricated 57 electrical control panels of various sizes and types. The customer saw first-hand that their new hydroforming press control system functioned 100% to specification before the actual on-site installation was undertaken.
