

## Dry Ice Expanded Tobacco (DIET) Plant Process Information System

- A major tobacco processing company operated a main processing facility with a Plant Process Information (PPI) system that provided for the tracking of tobacco case information related to various operations. With business objectives evolving, the tobacco company required that data collection and reporting related to process operations of their Dry Ice Expanded Tobacco (DIET) facility be automated.
- Brock Solutions designed and developed the DIET PPI system to track DIET tobacco cases, automate data collection, enable automatic report generation, and exact net weights.
