

National Courier's New Distribution Facility's Parcel Sortation System

- A Canadian national courier company strengthened its market position by building a new Parcel Distribution Facility in Montreal. The build project involved construction of the new facility complete with installation of a complex Parcel Sortation System that included 26 Unload lines and 82 sort destinations.
- Brock's mandate on the project included the complete design, development, and deployment of a sortation controls system required to run the complex conveyor lines that included numerous machine-level controls.
