

## Large Parcel Sortation System

- Canada's national postal service (Canada Post Corporation) looked to upgrade one of its distribution centers in Ontario with a comprehensive Package Sortation system.
- The postal service's expectations for package throughput necessitated that the system meet or exceed 14,000 packages per hour. Brock Solutions' role involved providing a complete High-Level Controls System to interface with Host Systems, a Real Time Sort Controller (RSC), and Programmable Logic Controllers (PLCs).
