

## Canada Post's Revenue Verification Unit Project

- Canada's national postal service—Canada Post—identified the problem of lost revenue as being related to recurring inaccuracies in the reporting of parcel weights and dimensions by high-volume corporate customers.
- Canada Post countered the problem by implementing a Revenue Verification Unit (RVU) system in one of its high-volume distribution centers. Brock Solutions was contracted to design and develop a pilot stand-alone RVU system to solve the postal service's loss of revenue problem and provide a return on investment (ROI) of a few months.
