

## Pharmaceutical MES Evaluation and Implementation Project

- An international manufacturer of prescription medications ran a manual system for the handling of their Clinical Supplies Department's Raw Materials, Bulk Drug Products, and Primary Packaging operations. As part of a corporate initiative to increase operational visibility and overall performance throughout their entire organization, the company looked to automate.
- Brock Solutions was contracted to evaluate a number of Manufacturing Execution System (MES) vendors, select the package best suited to the pharmaceutical company's needs, and program and configure the software solution to establish real-time flow of information across the production floor.
