

## **Blast Furnace Reline Upgrade – Panels and Control**

- To assure that the reliability of steel operations was maintained and that the production of quality steel was optimized for the long term, a globally recognized steel producer looked to upgrade one of its integrated mills with a Blast Furnace Reline/Control Upgrade.
- Brock Solutions' role was extensive, and included building, shipping, and installing all required electrical control panels; updating existing PLCs with newer version PLCs complete with added functionality; designing, programming, and deploying a new Operator Interface System; and integrating the systems into a fully redundant network architecture.
