

Galvanizing Line Automation Upgrade – Air Knives, Weld Tracking, Coating Weight Gauge Control

- A leading producer of steel looked to upgrade an existing Galvanizing Line Automation System. The current system was at maximum capacity, and the steel producer was experiencing a number of problems that were adversely affecting production quality and cost effectiveness.
- Brock Solutions was contracted to perform specialized automation services to maximize the line's weld tracking, knife position control, and coating weight gauge control. Installation had to take place within a tight schedule of only a few hours of scheduled downtime. Interruptions to normally scheduled operations were unacceptable.
