

Portal Crane Drives and Controls Retrofit

- A leading North American steel supplier contracted Brock Solutions to supply a new DC drive and controls package to retrofit two 75T mobile gantry cranes. The project presented several unique challenges, including a 14-week time frame between shipping seasons scheduling limitation, a short start up of less than 1 week per crane, limited space for new equipment, and inclimate weather conditions.
- Unique challenges were handled efficiently as a result of Brock Solutions' comprehensive project management implementation methodology. The completed projects delivered return on investment of less than two years (**payback <2 years**) based on maintenance savings alone.
- Contact us at info@brocksolutions.com for the complete project profile.
