

“No Risk” Blast Furnace Retrofit

- A leading North American steel producer operated with an antiquated blast furnace that was experiencing production inefficiencies and declining reliability. The steel producer knew the time had come for a full-scale, mid-campaign upgrade.
- Brock Solutions was contracted to design and develop a new control system, and deploy it without interrupting existing operations of the blast furnace. Key aspects of Brock’s approach to the project included simulation testing and shadow mode commissioning.
- Contact us at info@brocksolutions.com for the complete project profile.
